

The round brown [agate table top](#), with its unique texture and warm tone, has become a new favorite in interior design in recent years. It is not only a masterpiece of nature, but also adds a touch of luxury and art to the space. Brown Agate is a semi-precious stone that was formed over millions of years from the deposition of silica. Its name comes from the spiderweb-like textures that weave through it, which can be as fine as silk or as rough as a rock, making each piece unique. The base color of brown agate is usually warm yellow, orange or brown, which is interwoven with white, gray and other textures to form a rich and varied pattern.

Brown Agate Table Top has good light transmittance, and when light passes through the countertop, it presents a dreamy visual effect. Whether it is natural light or artificial light, it can interact with the texture of agate to create a warm and soft atmosphere, adding a sense of mystery and romance to the space.

Application scenarios and uses:

Brown agate table top are widely used in high-end residences, hotels, clubs and other places, suitable for:
