This fluorite comes from volcanic magma. In the process of magma cooling, the gas aqueous solution separated by magma contains fluorine. In the process of solution rising along the fissure, fluoride ions in the gas aqueous solution combine with calcium ions in the surrounding rock to form calcium fluoride, which forms fluorite after cooling and crystallization.

We can provide rainbow [fluorite Gemstone slab](#), can customize different sizes and shapes of semi precious stone/gemstone slab, arc, round, square. For you to customize your unique gemstone/semi precious stone slab.
