Backlit green fluorite slab, is a popular [green semi-precious stone slab](#). Green fluorite has good light transmission, and this unique light transmission property makes it favored in various application scenarios.

Green fluorite slab is known for its excellent light transmission properties. Its main component is the green fluorite mineral in the ore, which will produce fluorescence effect when exposed to ultraviolet or visible light, so that the slab has the characteristics of light transmission. This special light transmission makes it shine in many designs, which can add artistic atmosphere to the space.

Application scenario:

Architectural decoration: Green fluorite slab is often used for architectural decoration, such as walls, floors, ceilings and so on. Its light transmission characteristics can create a unique space light and shadow effect, making the whole space more artistic and modern.

Furniture application: Green fluorite slab is often used in furniture, such as side table, kitchen countertop, bar, backlit kitchen island, countertop and other semi-precious stone furniture.

Commercial display: Commercial places such as shopping malls, exhibition halls, etc., often use green fluorite slabs to create unique display Spaces. Light transmission can attract attention and make goods or exhibits more attractive.
